Service for Police

Prepared by:

Mustafa Hashem Ewida

Motasim Tariq Younis

2022

Description :

The application that I will describe to you is a system that police officers can use and deal with with ease.

It is a site where police personnel are logged in.

Only those responsible for writing investigations, important cases, prison files, complaints files and sensitive case files, so that all these files are dealt with through the system that I will create, which includes these important files and the fields required to be filled in until the files are completed without shortage in order to facilitate dealing with them and each file is divided for ease Refer to it and verify it, and there is a public login to provide what they need officially through this system and the file will reach the police to deal with it and the police will be contacted to confirm the file that was submitted.

Problem:

While I was in the police department to file a complaint against someone, I found some difficulties that I will mention

First: I waited so long for my turn to complain, and that lost time to complain didn't bother me more than minutes.

Second: When I went to the complaint clerk and found that he was waiting for the official papers on which the complaint was written, it took a while to get that paper and it was removed as well.

Third: When I went back to review the complaint, I found that the complainant was looking for it within a large amount of paperwork, and I noticed that it took a lot of time and effort.

I thought, what if all these papers happened to something and were lost or lost, we will see prisons deteriorate and the police are not in control because they do not have evidence and important files

I thought of this system to make it easier for the police and society.
